- The Mineral Resource estimates were prepared in accordance with the CIM Standards, and the CIM Guidelines, using geostatistical, plus economic and mining parameters appropriate to the deposit.
- All figures have been rounded to the relative accuracy of the estimates. Summed amounts may not add due to rounding.
- Mineral Resources are reported with effective date March 08, 2022.
- Mineral Resources were classified as Inferred. An Inferred Mineral Resource has a lower level of confidence than that applying to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that most of the Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.
- Mineral Resources, which are not mineral reserves, do not have demonstrated economic viability. The Mineral Resources may be materially affected by environmental, permitting, legal, marketing, and other relevant issues.
- Mineral Resources are based upon a cut-off grade of 0.4 g/t PGE+Au, correlated to Pd_eq grade of 0.35 g/t.
- Mineral Resources were limited by an economic pit built in Geovia Whittle 4.3 software and following the geometric and economic parameters:
 - Pit slope angles: 55°;
 - Price: Pd=US\$2000/oz, Pt=US\$1000/oz and Au=US\$1800/oz;
 - Costs: Mining costs=US\$2.00/t; Milling=US\$12.00/t; G&A=US\$1.50/t.
 - Metallurgical Recoveries:
 - Weathered rock: 68% for Pd, 67% for Pt and 40% for Au;
 - Fresh rock: 71% for Pd, 82.9% for Pt and 85.2% for Au.
- Blocks estimated by Ordinary Kriging at support of:
 - Trapia, Massapê, Esbarro: 40m x 40m x 4m with sub-block 5m x 5m x 2m;
 - Santo Amaro, Cedro, Cana Brava: 20m x 20m x 4m with sub-block 5m x 5m x 2m;
 - Curiu: 10m x 10m x 4m with sub-block 5m x 5m x 2m.
- PGE+Au grade = Pt g/t + Pd g/t + Au g/t.
